

CP2K-UK 4TH ANNUAL USER MEETING

Welcome & Project Update

Iain Bethune

i.bethune@epcc.ed.ac.uk

@ibethune @CP2Kproject

Introduction

- Welcome!
- 40+ attendees from 20+ institutions
- Experienced and novice users
 - Network, learn from others' experience
- Highlight opportunities for training & support
- Update on latest developments

Background: CP2K-UK

- CP2K is a powerful tool
 - DFT, Classical, Hybrid-DFT, TDDFT, LS-DFT, MP2/RPA/G0W0, QM/MM
 - MD, MC, Relaxation, NEB, Free Energy Tools
 - Suitable for simulations in range of EPSRC target areas
- CP2K is popular (and growing)
 - 2nd most heavily used code on ARCHER (£0.5m per year)
 - Growing users of CP2K on national service:
 - 42 (2Q14) -> 72 (1Q15) -> 116 (1Q16) -> 132 (4Q17)
 - EPSRC: Materials Chemistry Consortium, UKCP
 - NERC: Mineral Physics
- CP2K can be hard to use
 - Large feature set leads to complexity
 - Few default settings -> hard to set up systems from scratch
 - Lack of documentation

Support for UK CP2K Users

- CP2K-UK: EPSRC Software for the Future
 - £500,000, 2013-2018
 - EPCC, UCL (+ Lincoln), KCL
 - + 7 supporting groups
- Aims
 - Grow and develop existing CP2K community in UK
 - Lower barriers to *usage* and *development* of CP2K
 - Long-term sustainability of CP2K
 - Extend ability of CP2K to tackle challenging systems

Support for Users

- Training Events
 - Annual User Group Meetings
 - 14 days CP2K training during 2016
 - Collaborations with ARCHER, PRACE, MCC, UKCP & STFC
 - Visits to research groups (QUB)
 - CP2K Summer School
 - 23rd – 26th Aug 2016 @ King's College London
 - Majority from UK people
 - Slides and exercises still available:
 - www.cp2k.org/events:2016_summer_school:index
 - All CP2K events at www.cp2k.org/news
 - Archived info at www.cp2k.org/docs#workshops
 - Also notification by email

Science & Technology
Facilities Council

Queen's University
Belfast

Support for Users

- Ad-hoc bespoke support
 - Help installing CP2K on your cluster
 - Iceberg @ Sheffield, Lancaster HEC, KCL Physics Cluster, QUB ...
 - Training days / group visits
 - Debugging
 - Adding functionality (e.g. OPLS torsions)
 - Merging in user contributions
 - Advice on parallel performance - www.cp2k.org/performance
 - We would like more than just Cray machines!
- Documentation
 - Growing set of 'HowTo' guides: <https://www.cp2k.org/howto>
 - FAQs: <https://www.cp2k.org/faq>

• Let me know your **pain points**!

Support for Users

- Tools & Usability
 - Feedback from tutorials:
 - building an input is hard!
- CP2K input GUI
- Validation of input
 - CP2K releases 2.5 – 4.0
- Keyword Selection
- Show/hide sections
- Job templates
- Tooltip keyword help
- Import and edit existing input files
- Currently working on Chimera / tetr integration
 - System set-up and visualisation

epcc

Support for Developers

- Development projects
 - 3 year PDRA developer post at KCL (2013-2016)
 - Trailblazer for future (externally funded) projects
 - Langevin Dynamics regions (Kantorovich, 2008, Phys Rev B)
 - BSSE calculations with arbitrary fragments
 - Filter Matrix Diagonalization (Rayson & Briddon, 2009, Phys Rev B)
 - REPEAT charge fitting (Campana *et al*, 2008, JCTC)
 - CP2K Installer
 - Vibrational Initialisation for MD (West & Estreicher, 2006, PRL)

Support for Developers

- External funding
 - Three 12 month funded projects from ARCHER eCSE
- LR-TDDFT with Hybrid Functionals/ADMM
 - Dec 2015 – Dec 2016 : Sergey Chulkov / Matt Watkins @ Lincoln
 - Maximum Overlap Method
 - MO visualisation output in Molden format
 - See <https://www.archer.ac.uk/training/virtual/2016-11-23-CP2K-Improvements/TDDFT.slides.html>
- Electron Transport based on Non-Equilibrium Green's Functions Methods
 - Dec 2016-Dec 2017
 - Sergey / Matt @ Lincoln, Lev Kantorovich @ KCL, Artem Fediai @ TU Dresden

Support for Developers

- CP2K performance improvements
 - Started Dec 2015 - Mark Tucker @ EPCC
 - Large, load imbalanced systems (~10% speedup, GBs memory saving)
 - GAPW (3.6x speedup!)
 - vDW-corrected XC functionals (~5% speedup)
 - K-points
 - See <https://www.archer.ac.uk/training/virtual/2016-11-23-CP2K-Improvements/CP2K-virtual-tutorial.pdf>

Nodes of ARCHER	45	48	64	96
Original Code	1427	1176	1371	1278
Modified Algorithm	1312	1057	1241	1168
Improvement	8.8%	11.3%	10.5%	9.4%

Table 2: Overall Run Time (seconds).

- Charged cluster of 216 water molecules in 34\AA^3 box
- TZV2P MOLOPT basis set
- PBC off
- ~10% speedup

Community Involvement

- CP2K-UK project exists to support and grow the CP2K user community - how can you get involved?
 - Let us know what support you need
 - Via discussion session & feedback forms, or ad hoc
 - Provide support visits to individuals & groups
 - Contribute to the CP2K website / wiki
 - Join the CP2K discussion forum
 - <http://groups.google.com/group/cp2k>
 - Present at next year's user meeting

Community Involvement

- Interested in contributing to development?
 - Opportunity to get 6-12 months funding via ARCHER eCSE calls (next 31st Jan & 9th May 2017) for *“Improvements to code which allows new science to be carried out”*
 - Have a ‘killer feature’ that you *need* in CP2K?
 - Interested in working on a development project? Let me know...
- Acknowledge support from CP2K-UK grant (EP/K038583/1) in publications (and tell me!)
 - More impact = better chance of future funding
 - Cite CP2K reference papers (check your output!)
- Letters of support available to projects who will use/develop CP2K

Summary

- CP2K-UK exists to support your research using CP2K!
- Aim to improve confidence and competence in the user community
- User engagement and feedback is key
- Opportunity to get bespoke support for new development projects within your group
 - Support requests to i.bethune@epcc.ed.ac.uk

Acknowledgements

- EPSRC (EP/K038583/1)
- Joost VandeVondele & Jürg Hutter
- Lev Kantorovich, Ben Slater & Matt Watkins
- Jochen Blumberger, Patricia Hunt, Jorge Kohanoff, Angelos Michaelides, Philip Moriarty, Carole Morrison, Alex Shluger & Michiel Sprik

Lightning talks

- 3 minute summaries of research using CP2K:
 - Razak El-Maslmane, University of York
 - Dibyajyoti Ghosh, University of Bath
 - Nico Holmberg, Aalto University
 - Zheng Jiang, University of Southampton
 - Sanliang Ling, University College London
 - Fiona Reid, EPCC
 - Guido Falk von Rudorff, University College London

Charge Trapping in Bulk TiO₂ Rutile and Anatase

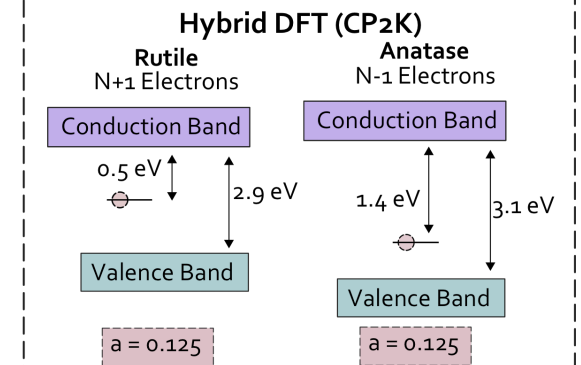

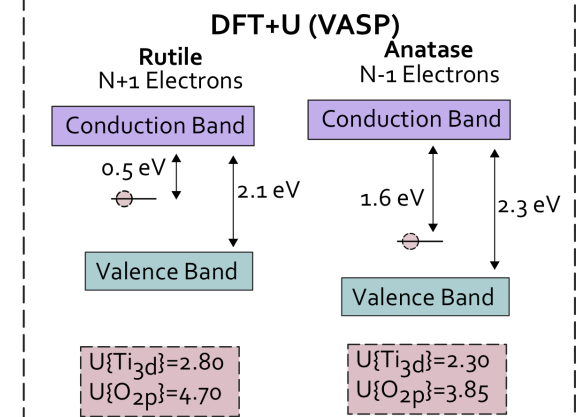

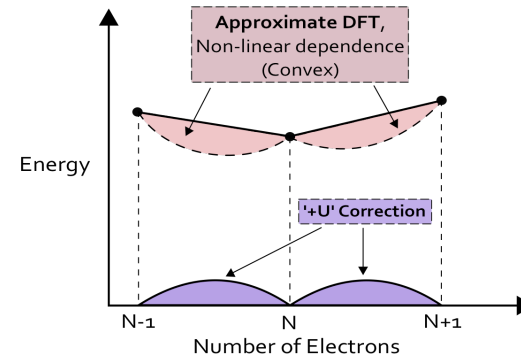

Me: Razak Elmaslmane
Supervisor: Keith McKenna
University of York

Rutile:
Electron polaron

Anatase:
Hole polaron

Finite size effects not (yet) considered for hybrid DFT results

Bulk TiO₂ Modifications

DFT+U → Non-linearity changes dramatically

Hybrid DFT → Non-linearity changes very little

CP2K

BOMD, CP2K and Me

Trapping Gaseous Pollutants on Defective Graphene Sheet

Selective trapping
Increased trapping capacity

UNIVERSITY OF
BATH

Line Defects at the Heterojunction of Hybrid Boron Nitride/Graphene Nanoribbons

Dibyajyoti Ghosh

J. Mater. Chem.
C, 2014, 2, 392

J. Phys. Chem.
118, 1

Phys. Chem. C, 2013, 1
21700

300 K

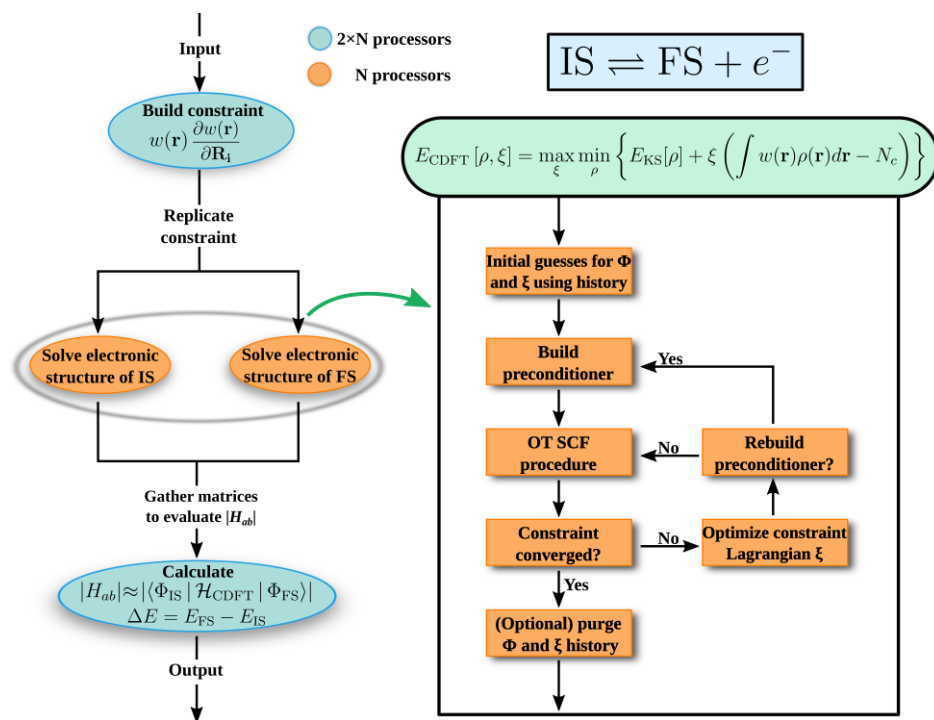

1000 K

Thank you

Efficient constrained DFT implementation for condensed phase electron transfer MD simulations¹

Nico Holmberg, Aalto University, nico.holmberg@aalto.fi

Code not yet in trunk, but available at <https://github.com/nholmber/cp2k-cdft-dev>

Electron transfer (ET) parameters directly from two-state MD simulations with explicit solvent

Example: Intramolecular ET in QTTFQ⁻ (258 water, 12 ps total, 0.5 fs step, 384 MPI cores)

Origin of the Enhanced Photoelectrocatalytic performance of BiOBr_{x-1-x}

Zheng Jiang, University of Southampton (z.jiang@soton.ac.uk)

Using HSE06 XC functional, Norm Cons Pot.

Computational Study of Multiferroic Materials Using CP2K

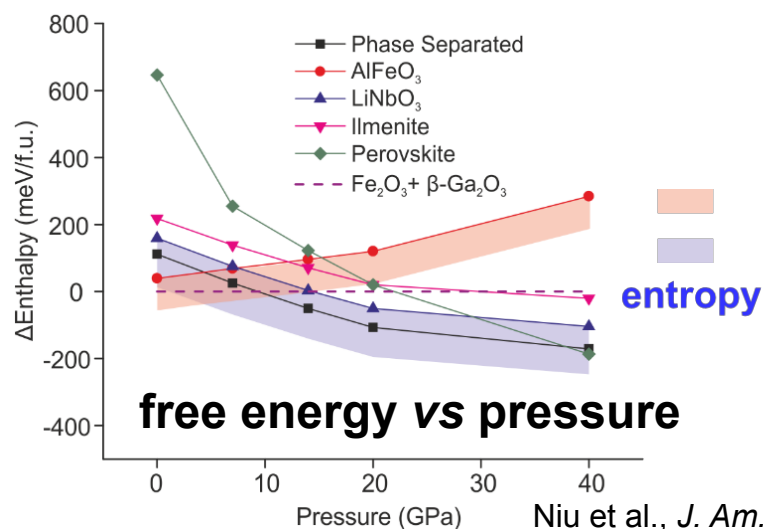

Sanliang Ling, Ben Slater, Furio Cora (UCL Chemistry)

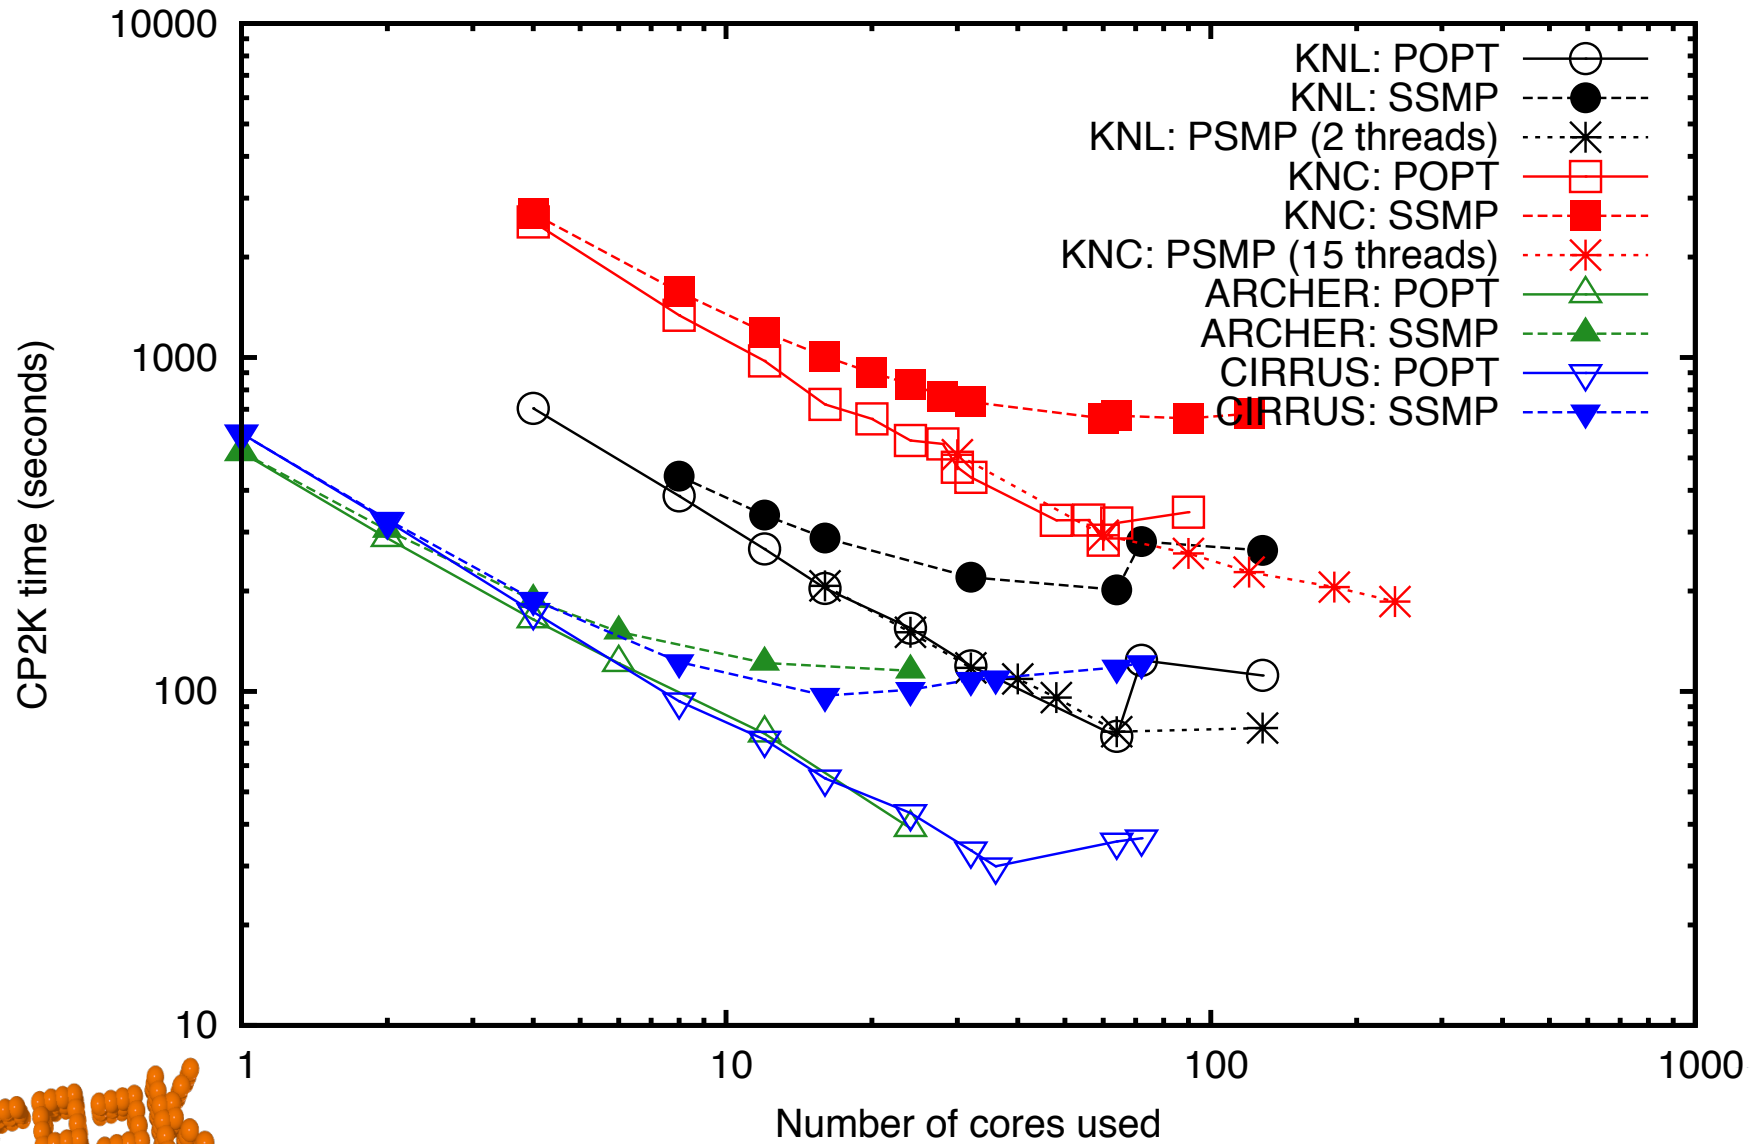

Corundum $\text{ScFeO}_3/\text{GaFeO}_3$

What are the most stable cation and spin distributions?

H2O-64 benchmark for 1 time step - comparing different machines

H2O-64 benchmark for 1 time step - comparing different machines

Xeon Phi Acknowledgements

- Over the last few years I've been looking at poking and prodding the CP2K code for Intel's Xeon Phi hardware (adding OpenMP and removing threaded allocates helps a little (RI-261357))
- Attempts so far suggest that re-structuring data to give better initialisation costs more than the benefits gained (pool of 4-5 times slower than ARCHER (Ivy Bridge))

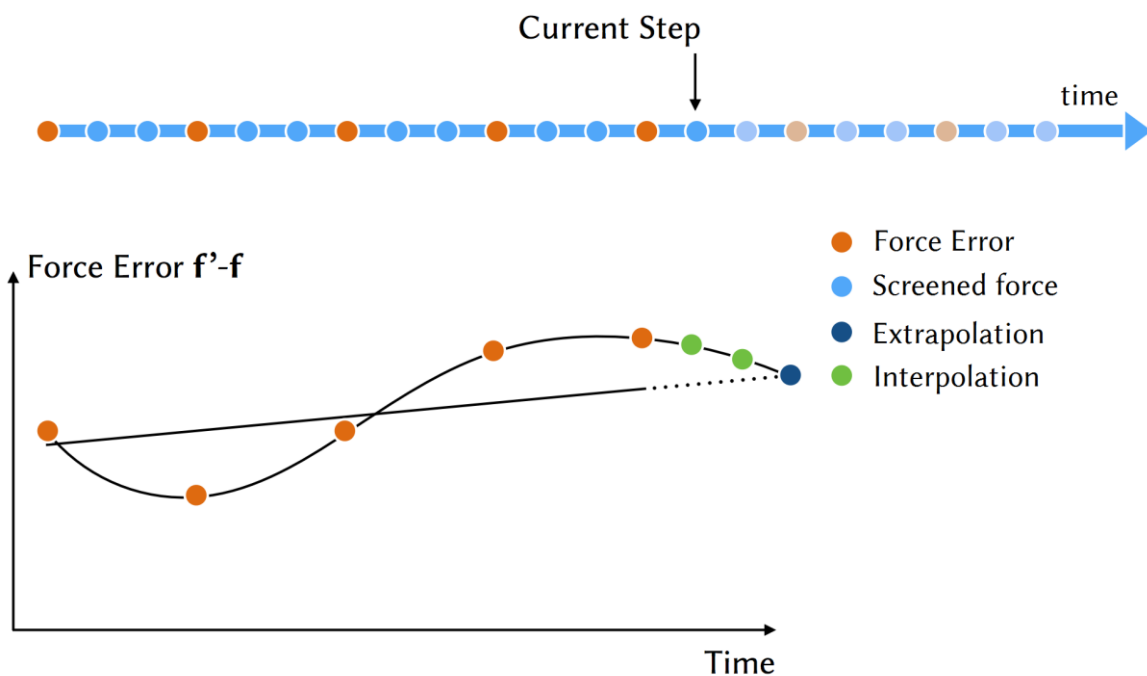

Faster HFX forces in MD runs

$$E_X^{\text{HF}} = -\frac{1}{2} \sum_{\lambda\sigma\mu\nu} \left[\sum_i C_{\mu i} C_{\sigma i} \right] \left[\sum_j C_{\nu j} C_{\lambda j} \right] \int d\mathbf{r}_1 \int d\mathbf{r}_2 \frac{\phi_\mu(\mathbf{r}_1) \phi_\nu(\mathbf{r}_1) \cdot \phi_\lambda(\mathbf{r}_2) \phi_\sigma(\mathbf{r}_2)}{|\mathbf{r}_2 - \mathbf{r}_1|}$$

Density Matrix Components
Atomic Orbital Basis
Electron-repulsion integrals (ERI)

$|\mathbf{F}| > 10^{-3}$: 10^2 per atom

$|\mathbf{F}| < 10^{-9}$: 10^6 per atom

Speed-up:

CoO: 3.0x

FeO: 2.4x

Discussion session

- Suggested topics:
 - CP2K Development projects (Jürg)
 - Getting started with CP2K / Usability (Iain)
 - Hybrid Functional Calculations (Ben & Sanliang)
 - TDDFT (Matt & Sergey)
 - Others?
- What could the CP2K-UK project do in the next year that would give the most help to your research?

| epcc |

Summary

- Thank *you* very much for coming
- Thanks to all our our speakers
- Please complete feedback forms and return them before you leave
- See you again next year!
